Application No.

The rejection of specification changes on paragraphs 58 and 61 is reviewed and removed.

In response to statements on claim 1:

Engel does not show (claims 1 and 6) explicitly a window of two panes showing layer 2 (or layer 1) and layer 3 entities respectively. Weinberg shows (Fig. 5; column 4, line 15-17; column 17, line 21-39) a window of two panes showing the navigation through a map on one pane and zooming in the other pane in an analogous art for the purpose of visualization of web sites and hierarchical data structures.

A protocol tree is a general statement to describe multiple nested protocols as depicted in fig. 19. The labeling on the left hand side clearly refers to OSI layers. This is a clear indication of Engel does have OSI in mind, particularly data link layer, i.e. OSI layer 2 and network layer, i.e. OSI layer 3. Fig. 19 clearly map IP based and other protocol suite into OSI protocol layer architecture frame.

As a person of ordinary skill in the art is aware of the MIB is used to model IP based network management information, particularly the protocol entities of network.

As a person of ordinary skill in the art is aware of the meaning of navigation through a map, Weinberg's citation is particularly associated with a map on one pane and zooming in the other pane.

The combination Engel and Weinberg recites all broad techniques covering all the limitations cited in claim 1.
